Suitable for Adult Dogs

WHAT IS ADDED TO THE HARROGATE VET FOOD & WHY?

Our foods are supplemented with the perfect balance of each vitamin, mineral and trace element your pet needs in their diet. Some of our foods also contain ingredients with additional health benefits:

FOS & MOS: Fructooligosaccharides (FOS) and Mannan-oligosaccharides (MOS)

These are prebiotics found naturally in plants such as banana, chicory and asparagus. These prebiotics encourage the growth of beneficial 'friendly' bacteria in your pet's digestive system and reduce amounts of harmful bacteria. Studies have found that dietary supplementation of FOS and MOS has beneficial effects on colonic health and immune status.

Methylsulfonylmethane (MSM)

An organic sulphur-containing compound which is found in raw fruits, vegetables, nuts and seeds. Sulphur is stored in every cell in the body, with the highest concentration found in joints, hair and skin. MSM has been found to have anti-inflammatory and pain-relieving properties and is therefore beneficial in painful inflammatory conditions such as arthritis.

Glucosamine hydrochloride & Chondroitin Sulphate

These two natural supplements are commonly recommended for treating osteoarthritis in dogs. Glucosamine regulates the synthesis of collagen in cartilage and may provide mild anti-inflammatory effects while chondroitin sulphate inhibits destructive enzymes in joint fluid and cartilage.
